

December 7, 2007 (DISTR), Revision 1: August 19, 2008

Ref: MegaStar ® Discontinuation

Dear Valued Customer,

It is our policy to continuously improve our product offering. This process, combined with regulatory changes and/or supply chain developments, occasionally requires that we discontinue a product. Whenever a product must be discontinued, Harris Stratex Networks (HSX) makes commercially reasonable efforts to:

- Provide 6 months notice so our customers can perform a needs assessment, obtain budget authorization, and order placements and spares before the Last Time Buy Date,
- Offer new products that are compatible with the products being discontinued to protect your radio network and Element/Network Management investment, and
- Deliver Repair and Return (R&R) support for 10 years after the Last Time Buy date, i.e. Dec 21, 2018.

Effective immediately, HSX reclassifies the ETSI/SDH version of MegaStar 155 1+1 and M:N models in all bands and options installed outside of US and Canada, as "Manufacturing Discontinued." You have until June 20, 2008 to place orders for delivery of additional spares and new radios. As MegaStar155 is not compliant with the Restriction of Hazardous Substances (RoHS) Directive shipments to EC countries are not possible. Spare modules for our EC customers are exempt from RoHS compliance.

I encourage you to contact your Sales Representative to obtain pricing quotations on new or refurbished equipment and current delivery lead-times.

The following table details the MegaStar 155 configurations covered in this notice, and the TRuepoint® product that HSX is offering to service your current and future needs. TRuepoint® is a high performance product family that offers a rich set of features, market leading performance, and builds on more than a decade of MegaStar 155 and Truepoint 5000 experience.

<u>Discontinued Product</u>	<u>Recommended Replacement Product</u>
